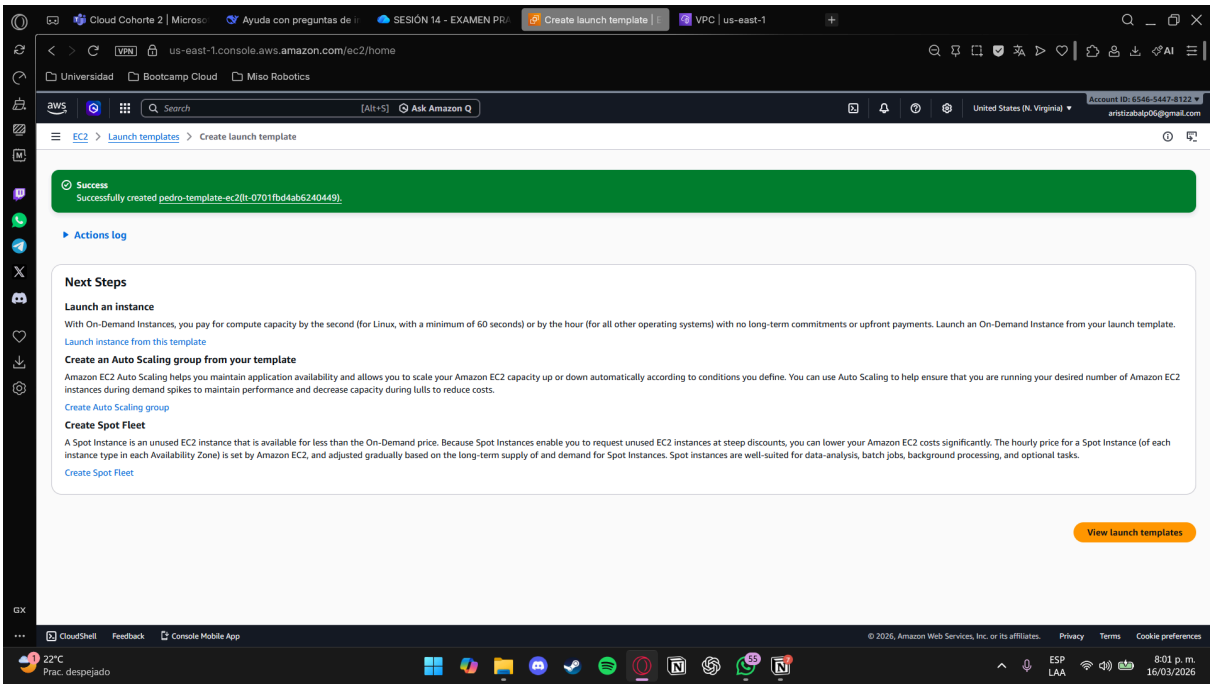
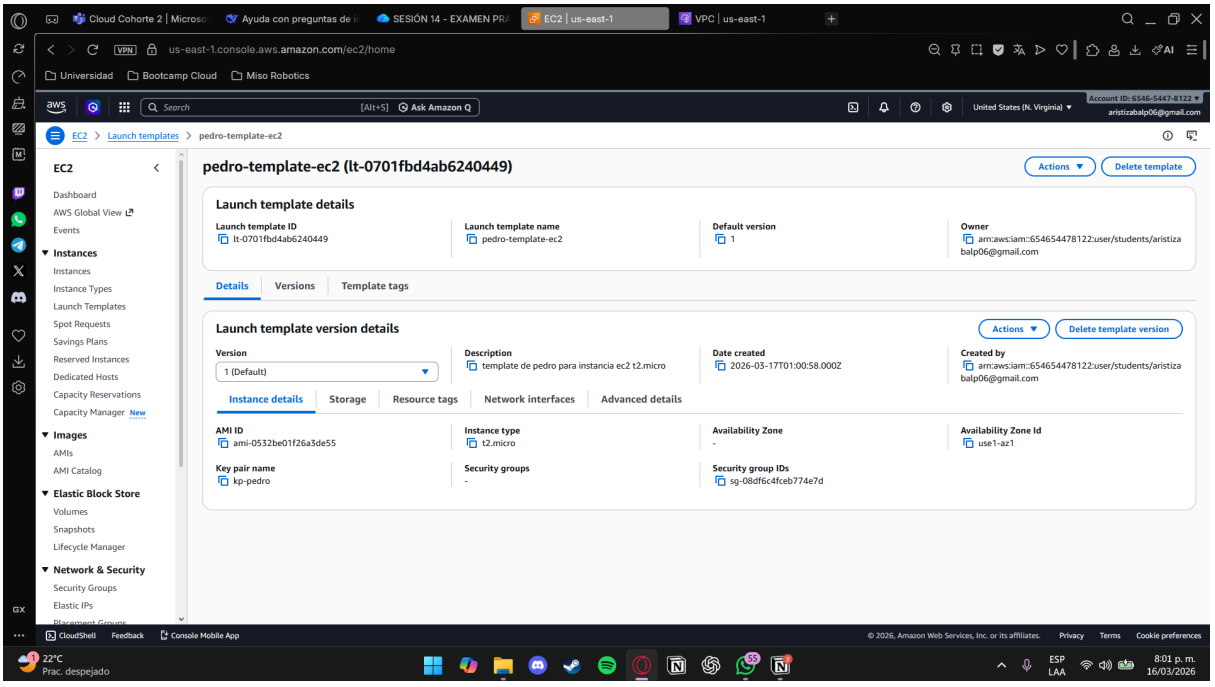
Examen 2 modulo 2

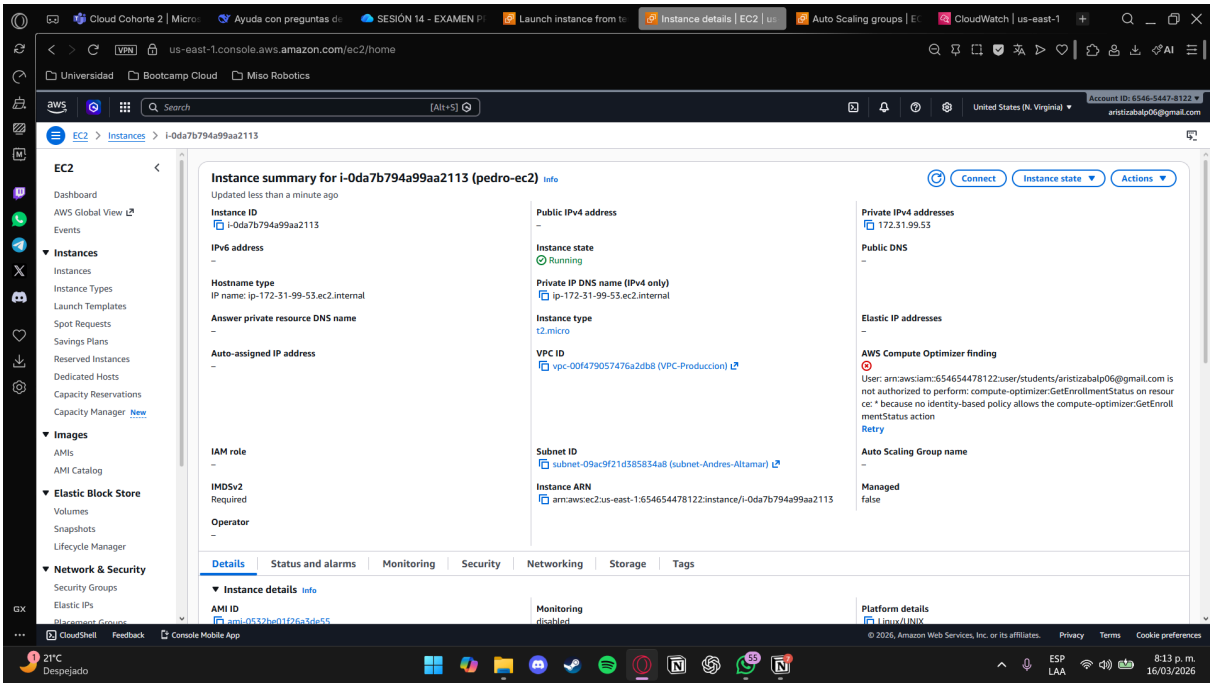
Parte 1

- Creamos el launch template

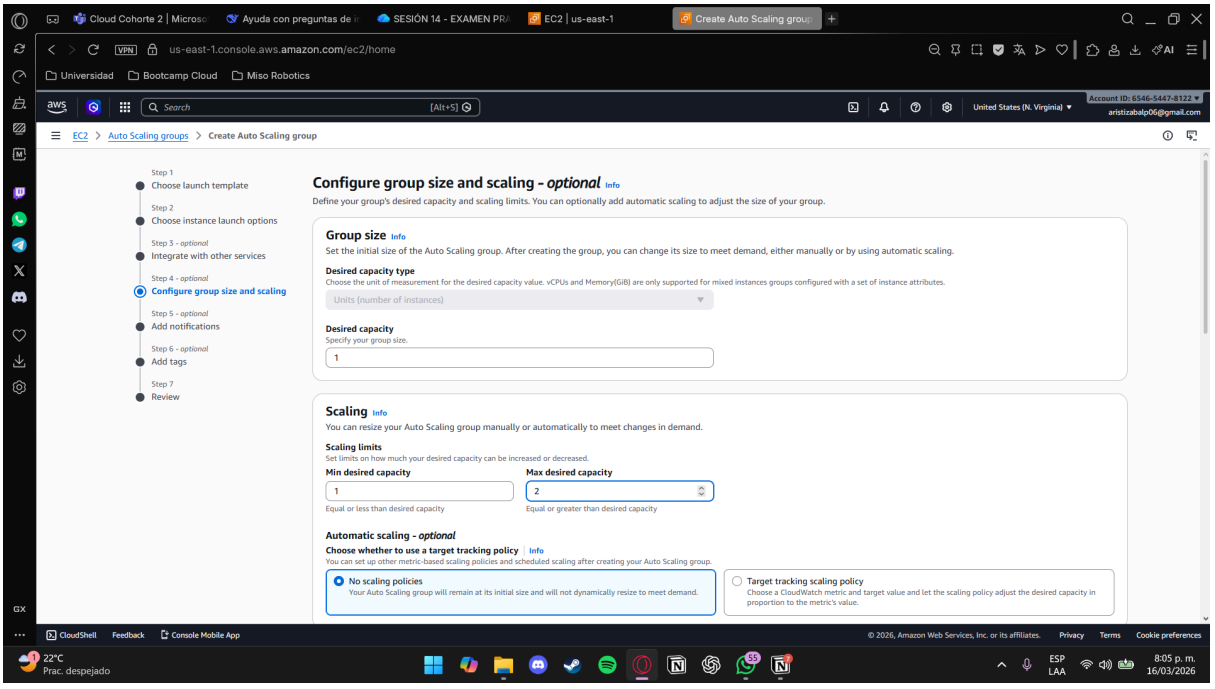


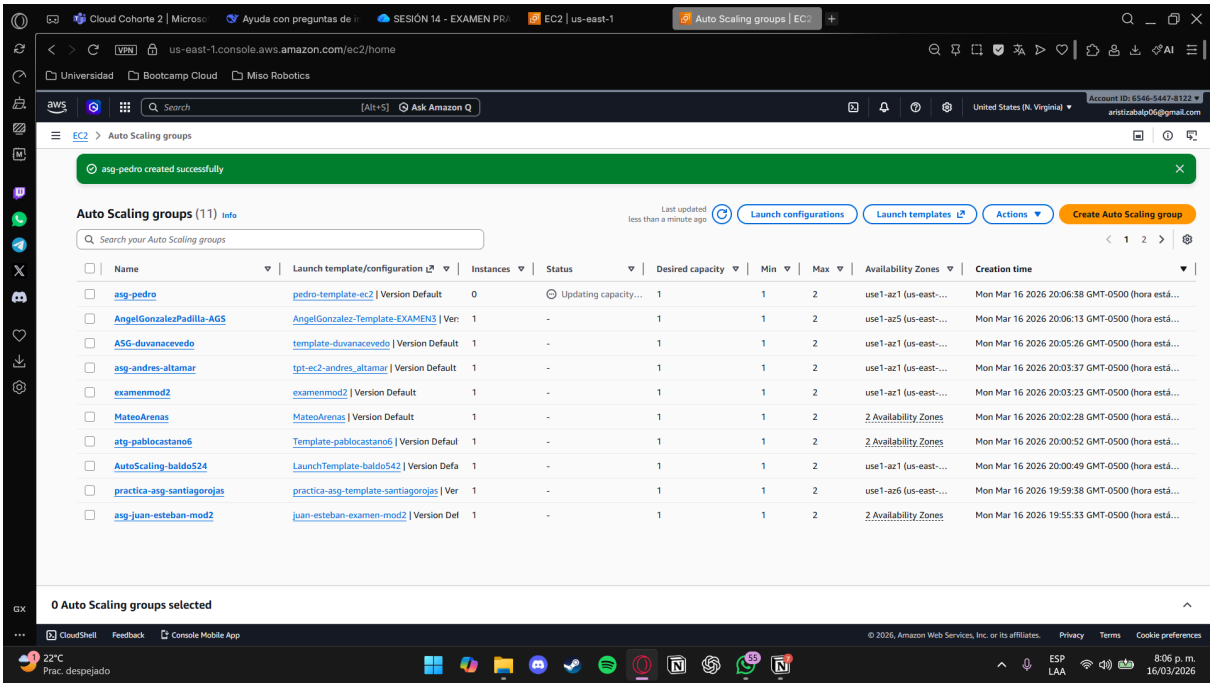


- Lanzamos la instancia EC2 a partir del template



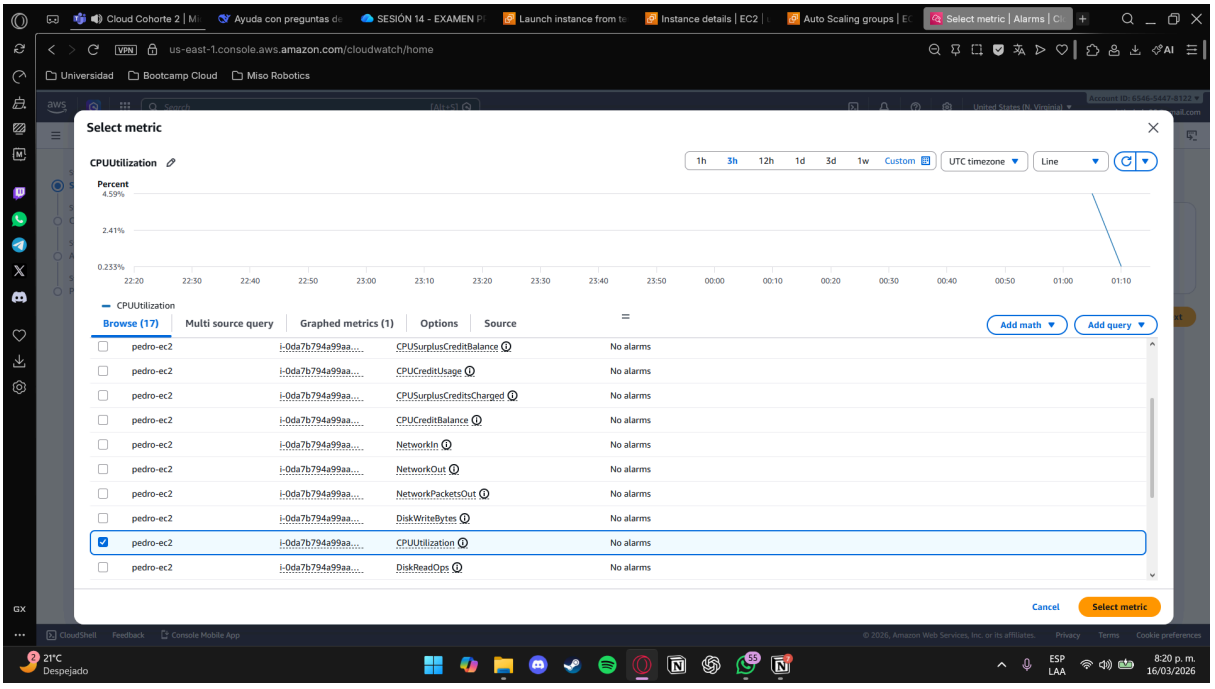
- Creamos el autoscaling group con los requerimientos pedidos



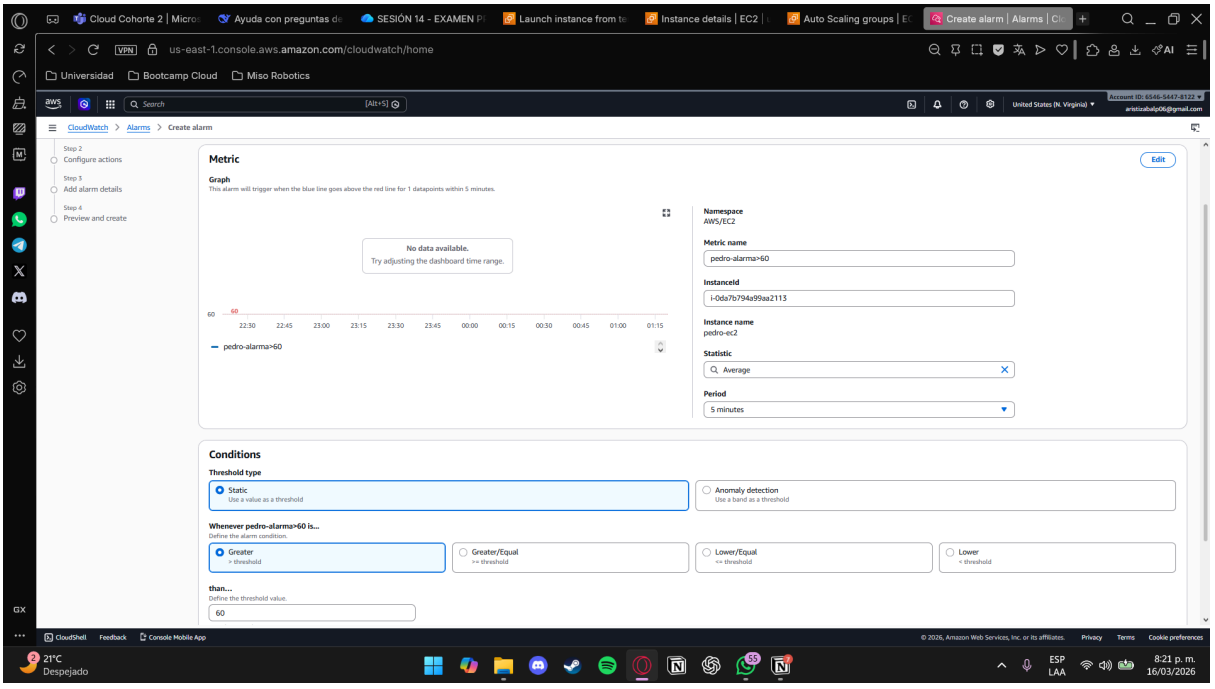


Parte 2

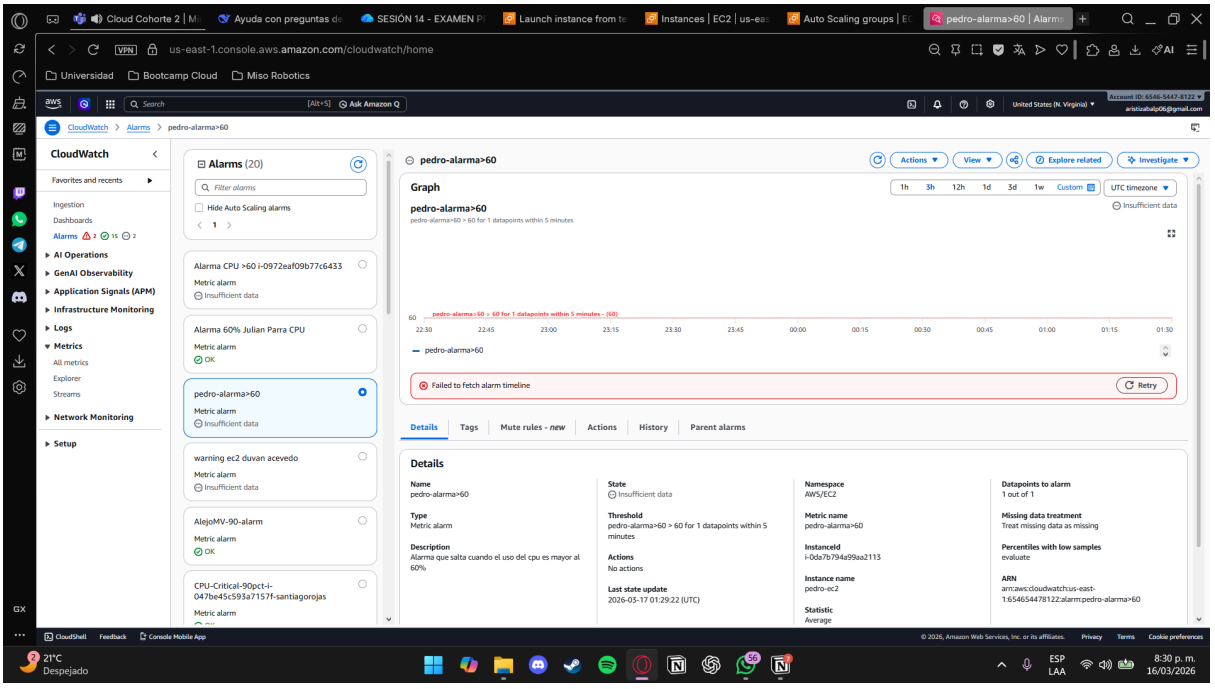
- Creamos la alarma en cloudwatch buscando por el ID de la instancia
- Seleccionamos CPU



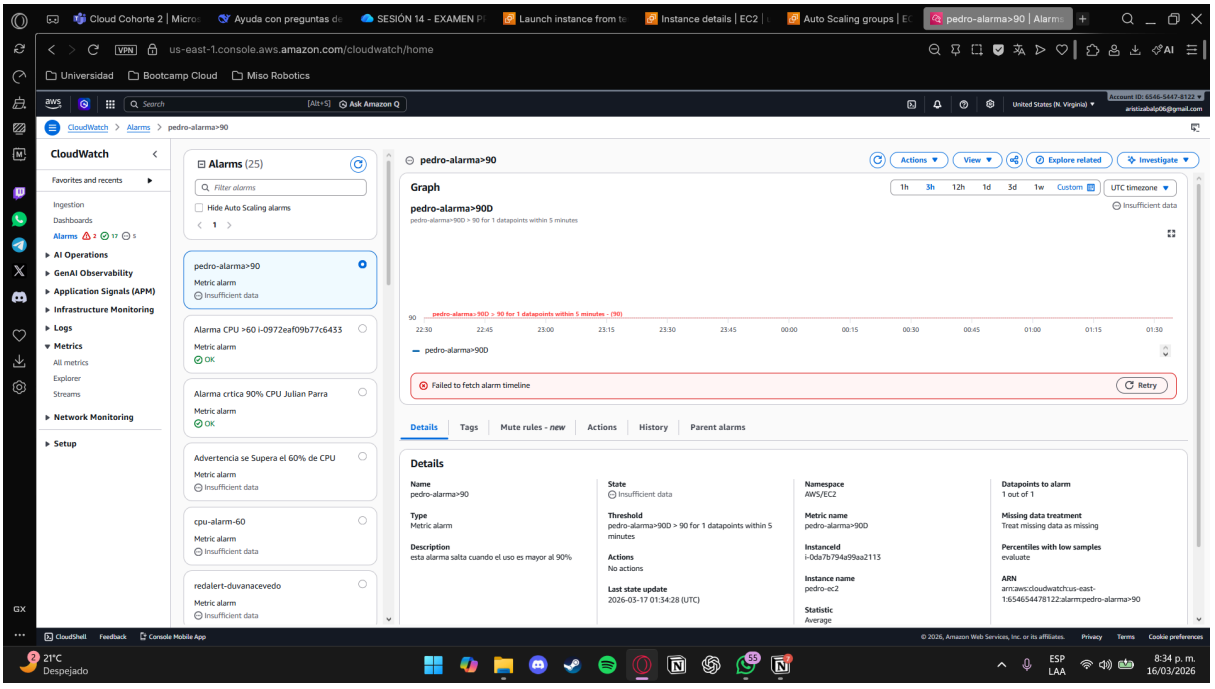
- Creamos primero la alarma para cuando el uso es mayor al 60%



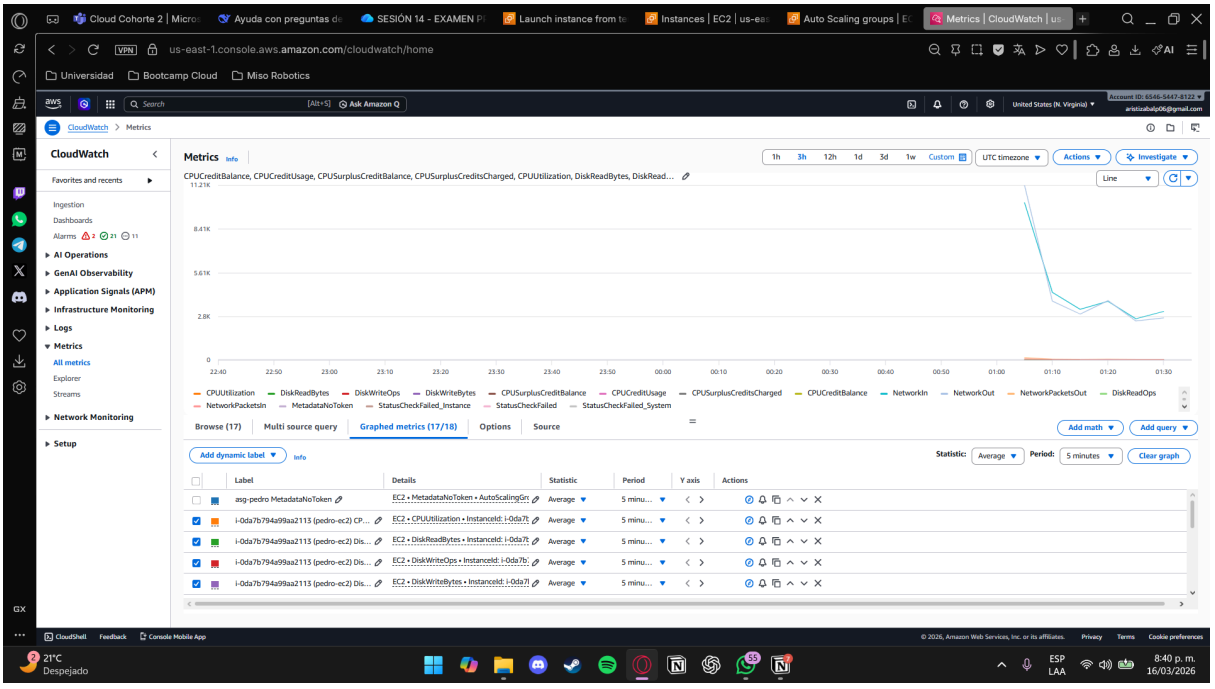
- Verificamos que la alarma fue creada (no salen datos porque lo deje en periodo de 5 minutos y tomé la captura recien creada la alarma)



- Creamos la segunda alarma para cuando el uso es mayor al 90% y verificamos que quedo creada

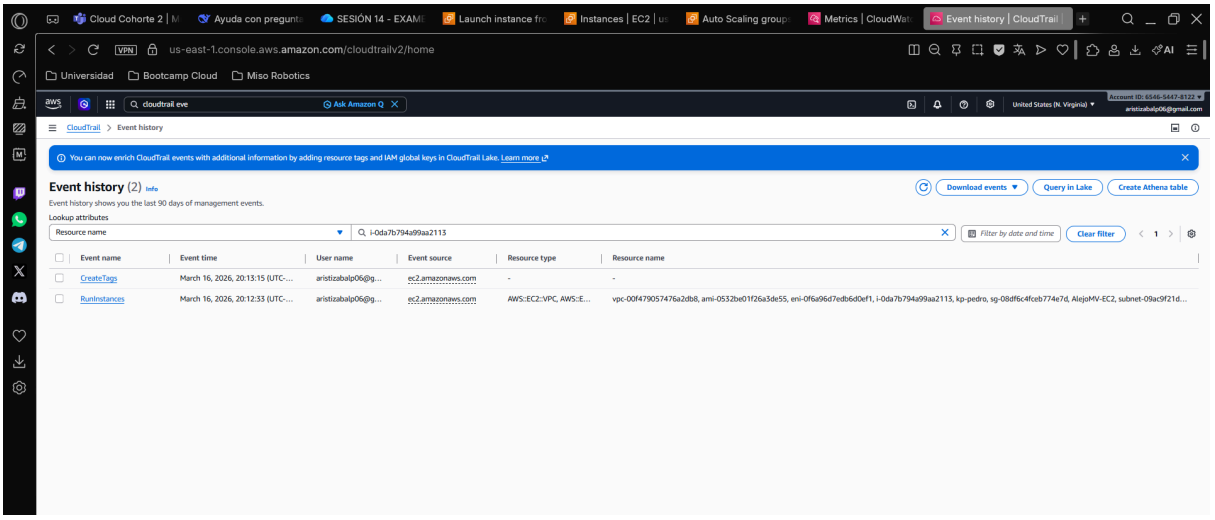


- Revisamos desde el cloudwatch las metricas asociadas al EC2



Parte 3

- Buscamos en cloudtrail por resource name y el ID de la instancia



- Ingresamos al evento RunInstances y verificamos el JSON donde se ve desde donde fue creado

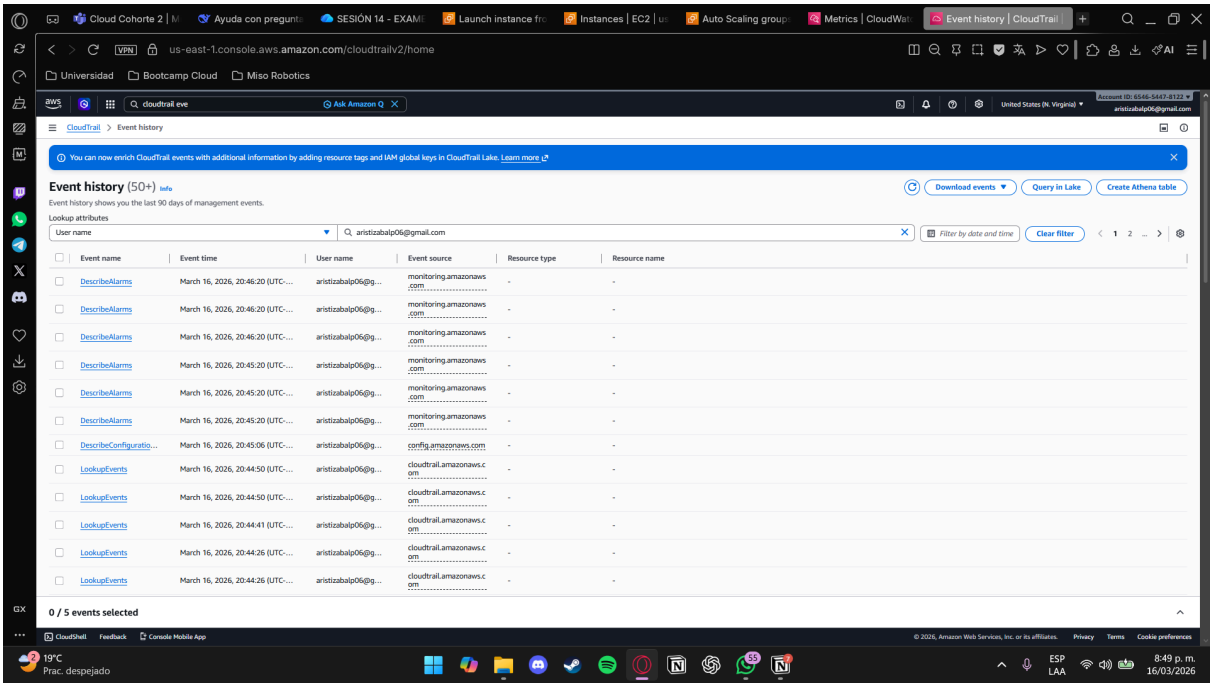
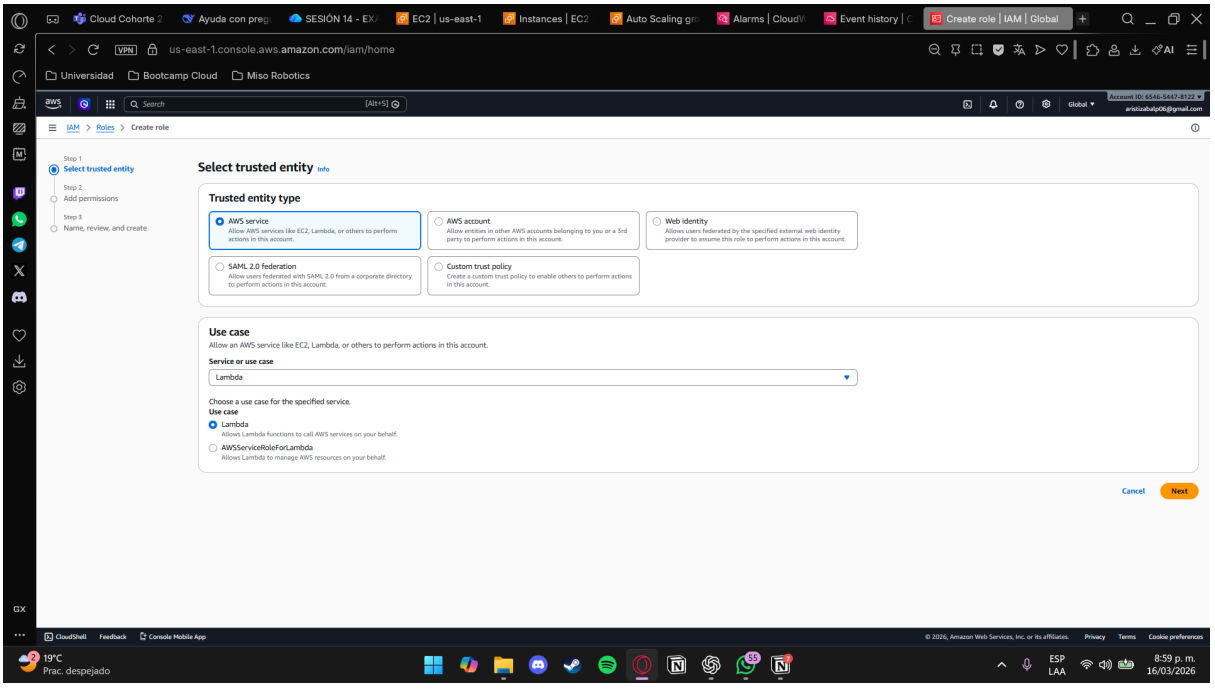
- Buscamos por user de IAM y listamos las ultimas acciones

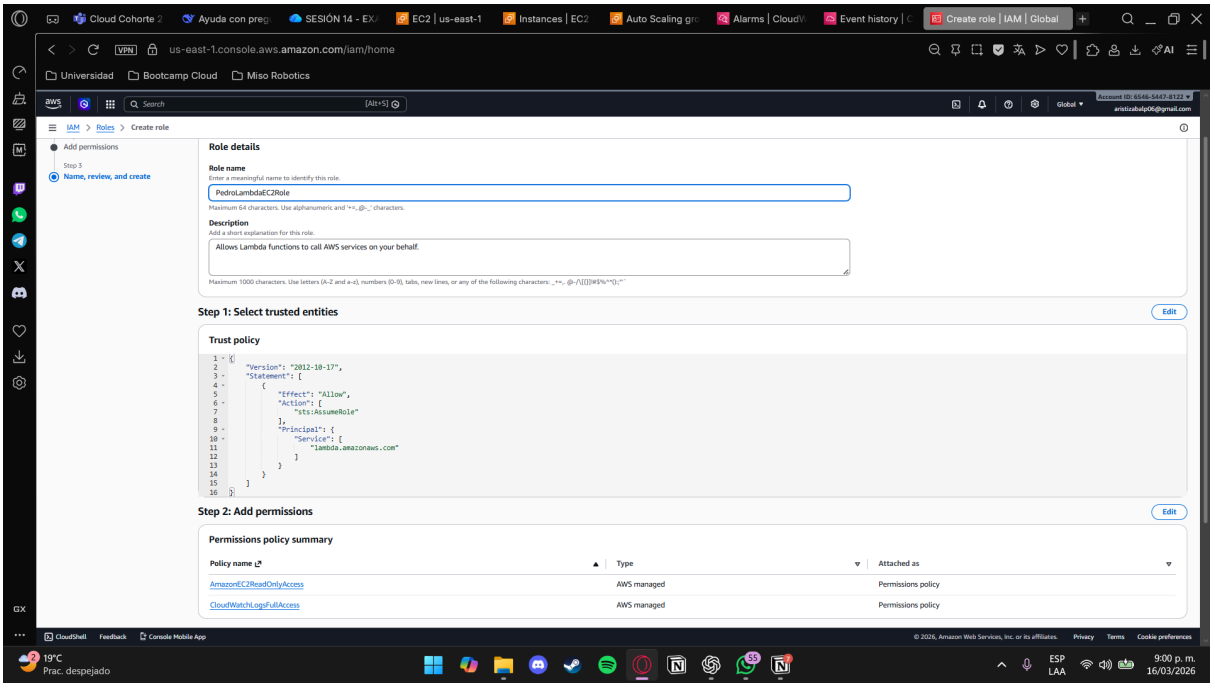


Parte 4

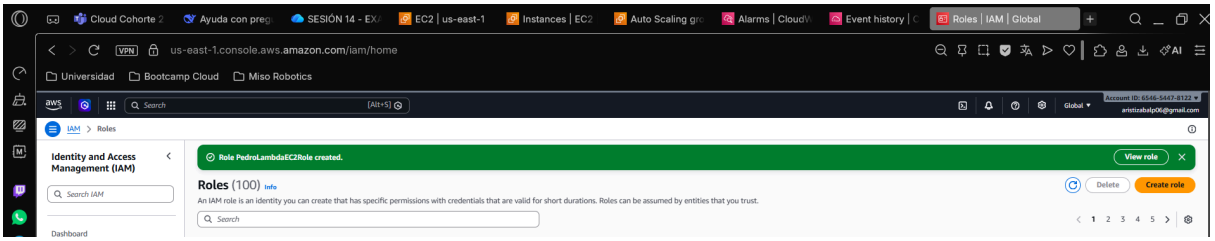
- Creamos el rol para la lambda



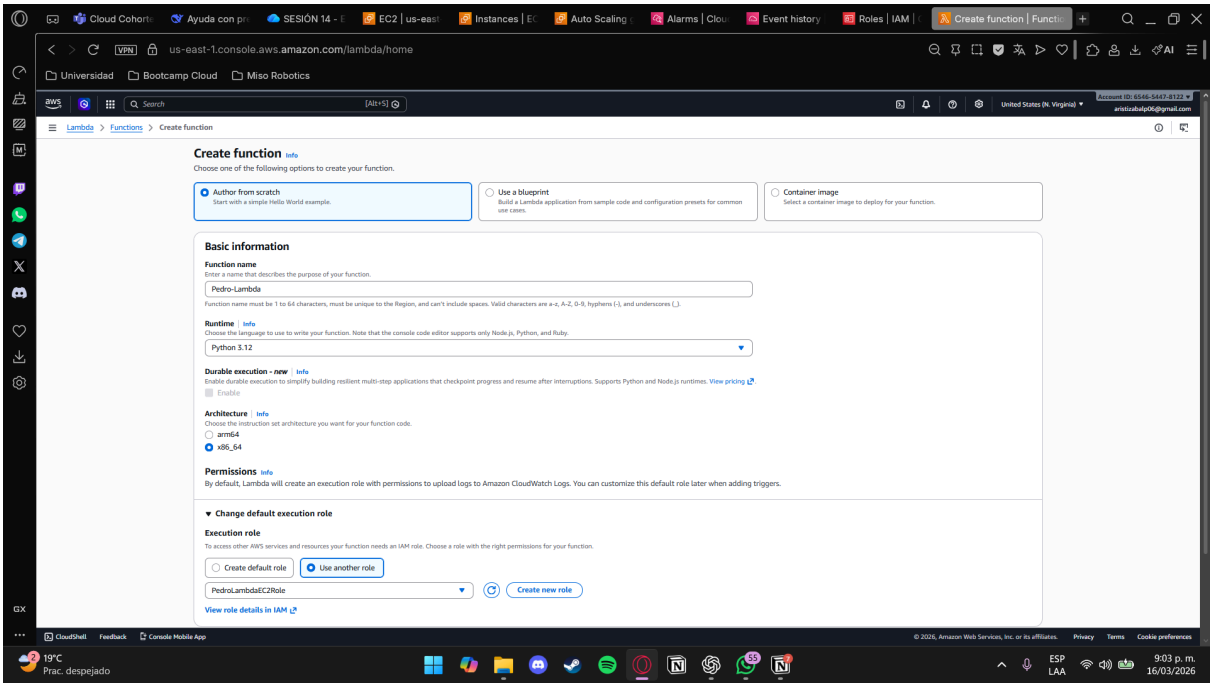
- Seleccionamos las politicas:
- **AmazonEC2ReadOnlyAccess**
- **CloudWatchLogsFullAccess**



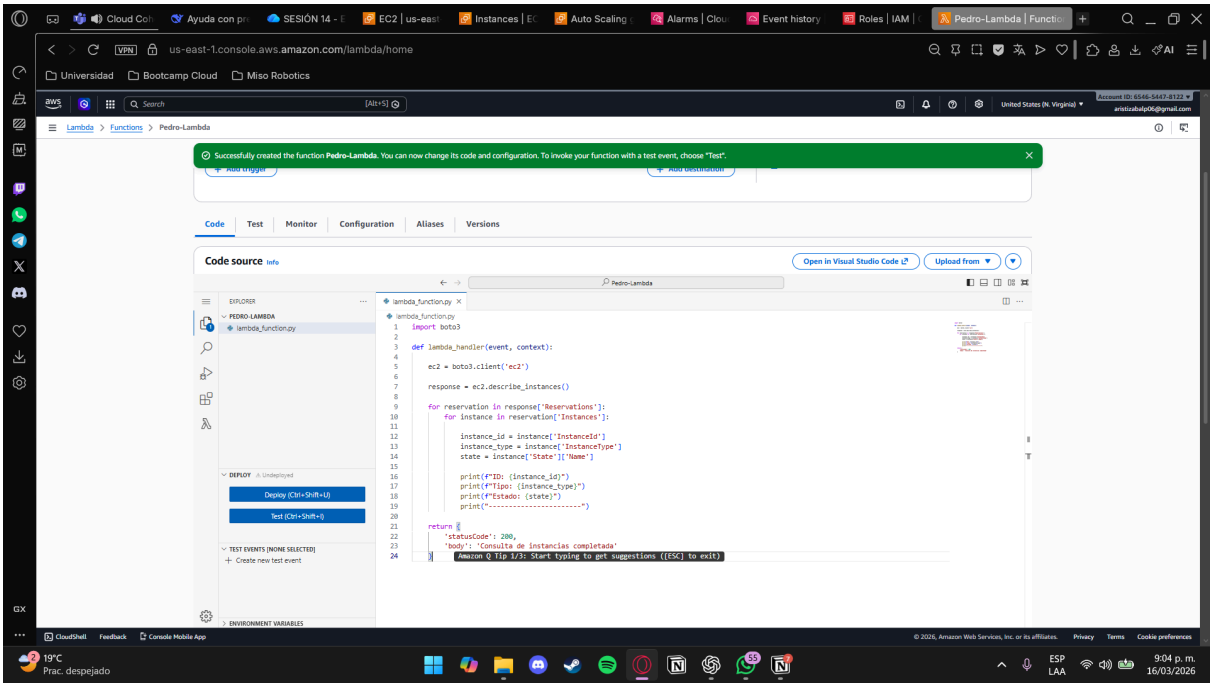
- Verificamos que el rol quedo creado



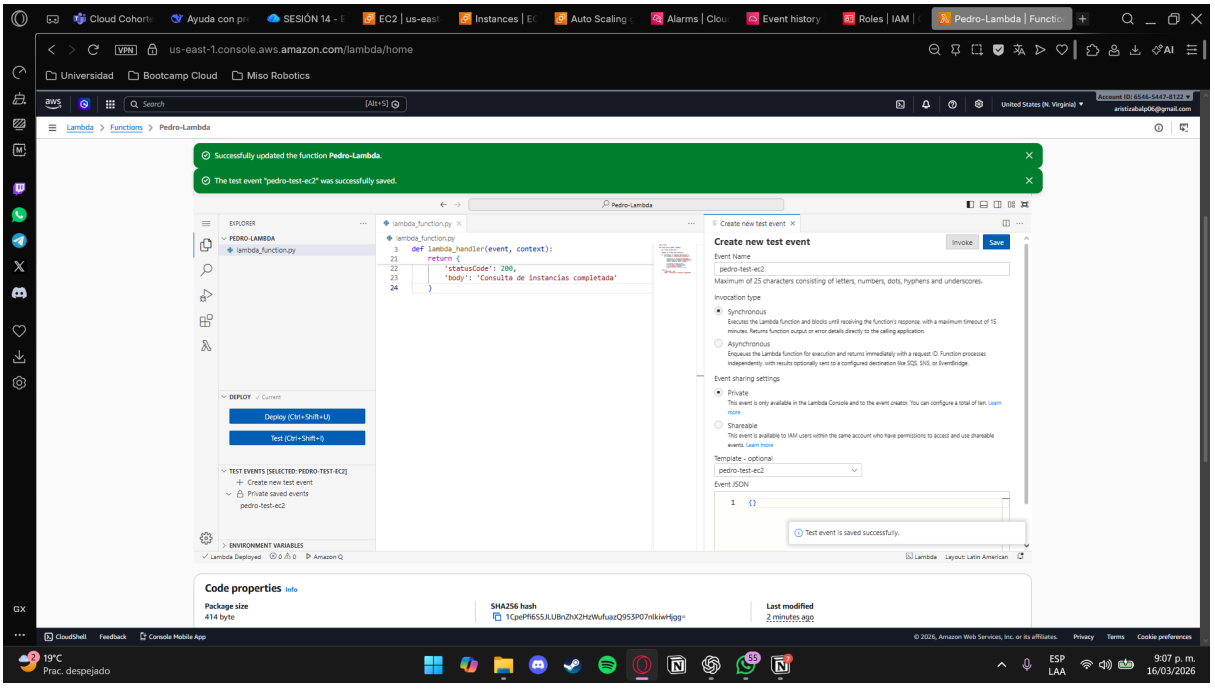
- Creamos la funcion de la Lambda



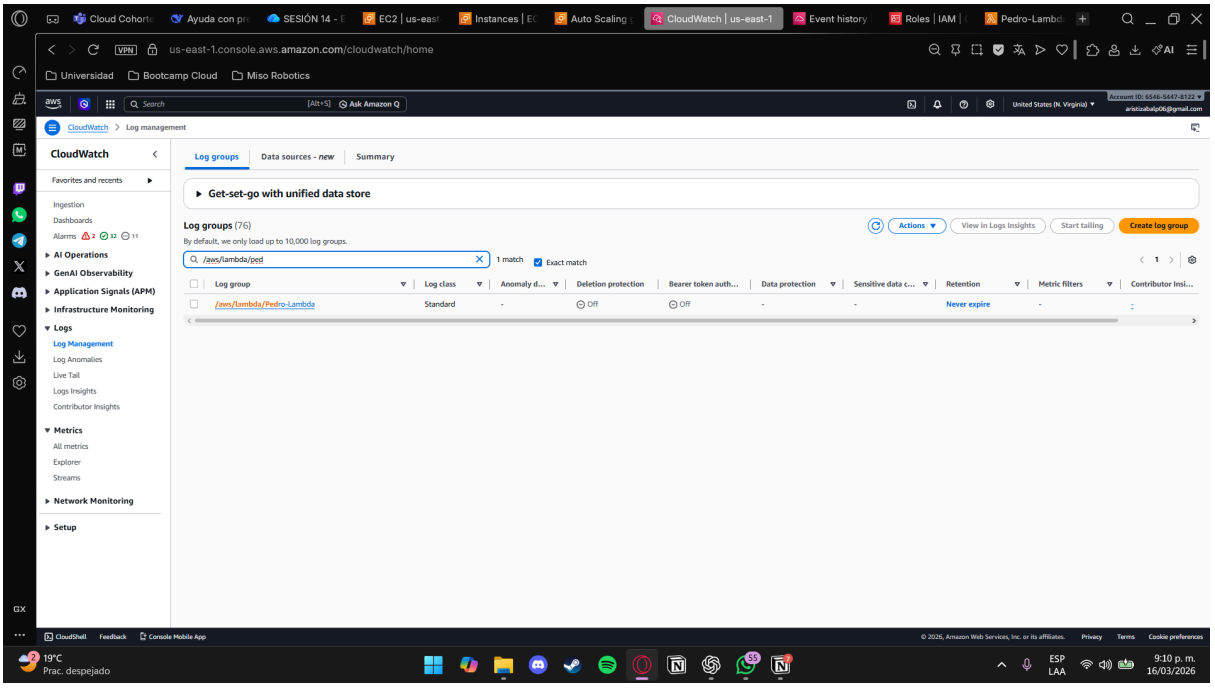
- Verificamos que la lambda fue creada y usamos un codigo proporcionado por ChatGPT, y le damos en deploy



- Creamos un test



- Vamos a cloudwatch → Log management → filtramos por el grupo de mi lambda



- Verificamos que efectivamente esta el Log de la lambda que implementamos previamente
