Practica

Cloudtrails

- Monitorea logs (eventos) de cambios que se hayan ejecutado en configuraciones por parte de recursos o personas.

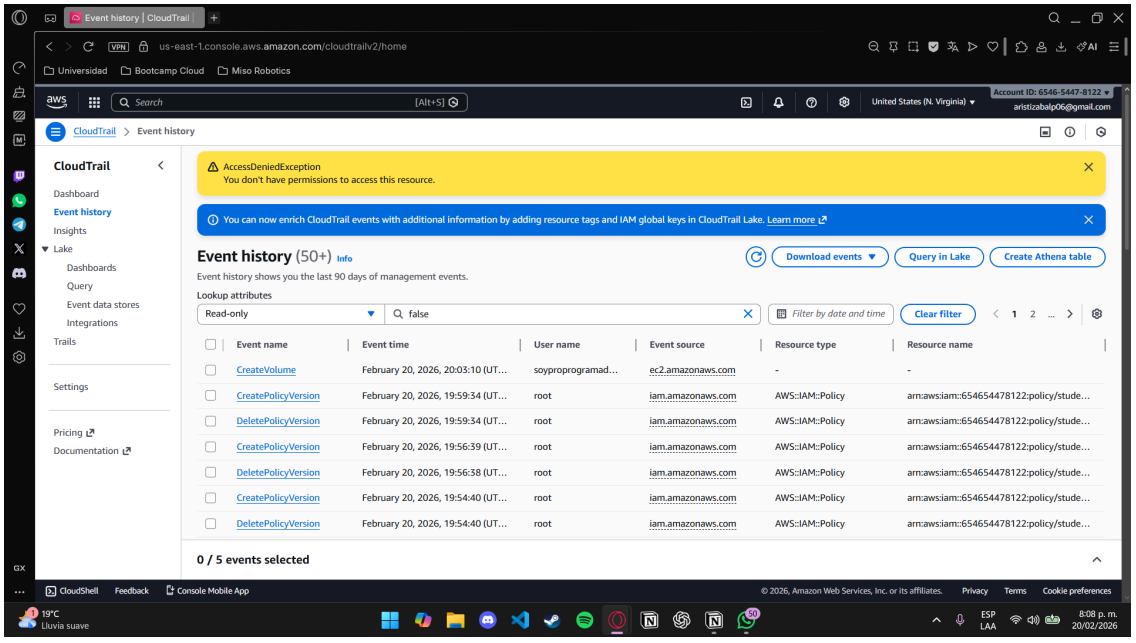
Los eventos se separan por:

- Read = Describe, list
- Write = Create, delete, modify

Los eventos solo se almacenan por 3 meses.

Cloudtrail solo detecta eventos dentro de la configuracion de las cosas en la consola. Por ejemplo si cambio un archivo dentro de una instancia no la detecta, porque ya es algo dentro del sistema operativo del ec2.

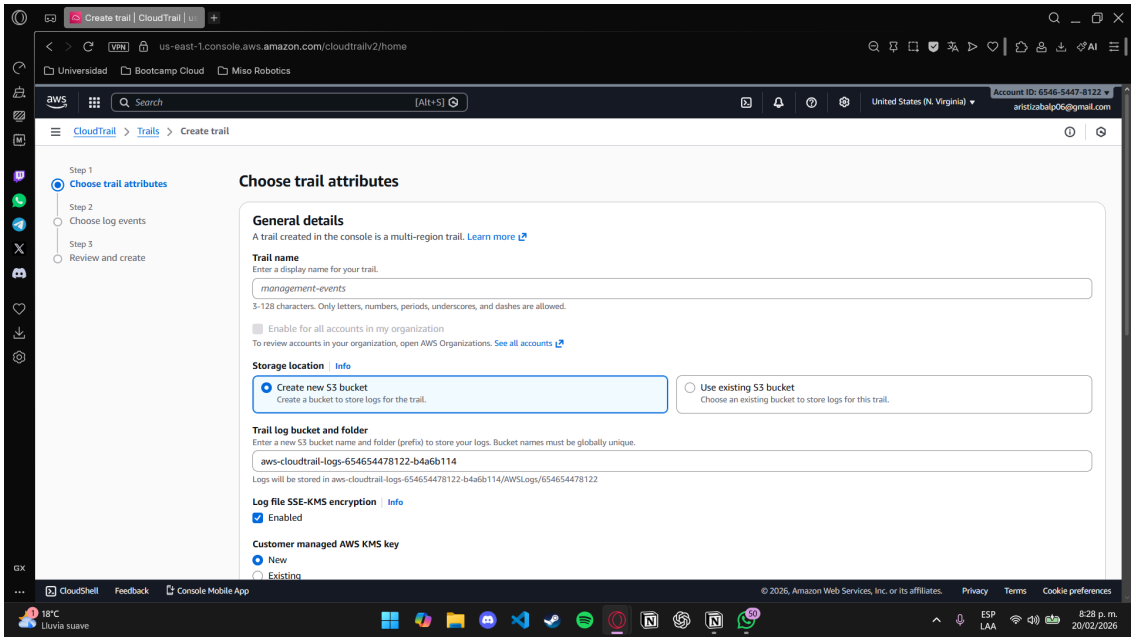
Filtrar eventos

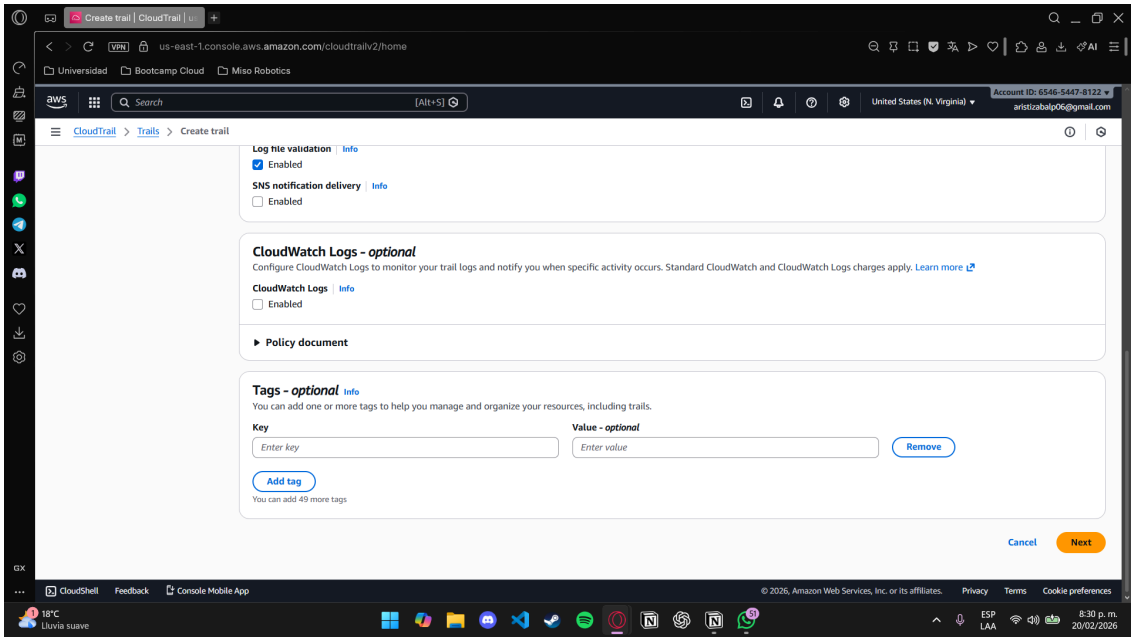


- Resource name: para buscar logs de un recurso especifico (de un ec2, de un bucket, etc)

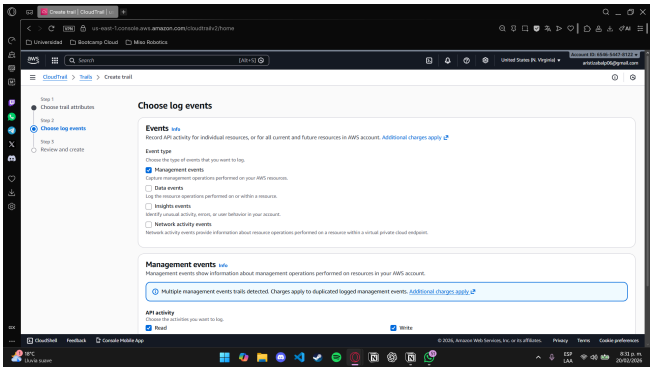
Trails

- Registros que se van a un bucket: para conservarlos mas tiempo y de forma mas barata
- Cloudwatch logs





Se eligen que tipo de eventos y actividad (read, write, etc) a rastrear

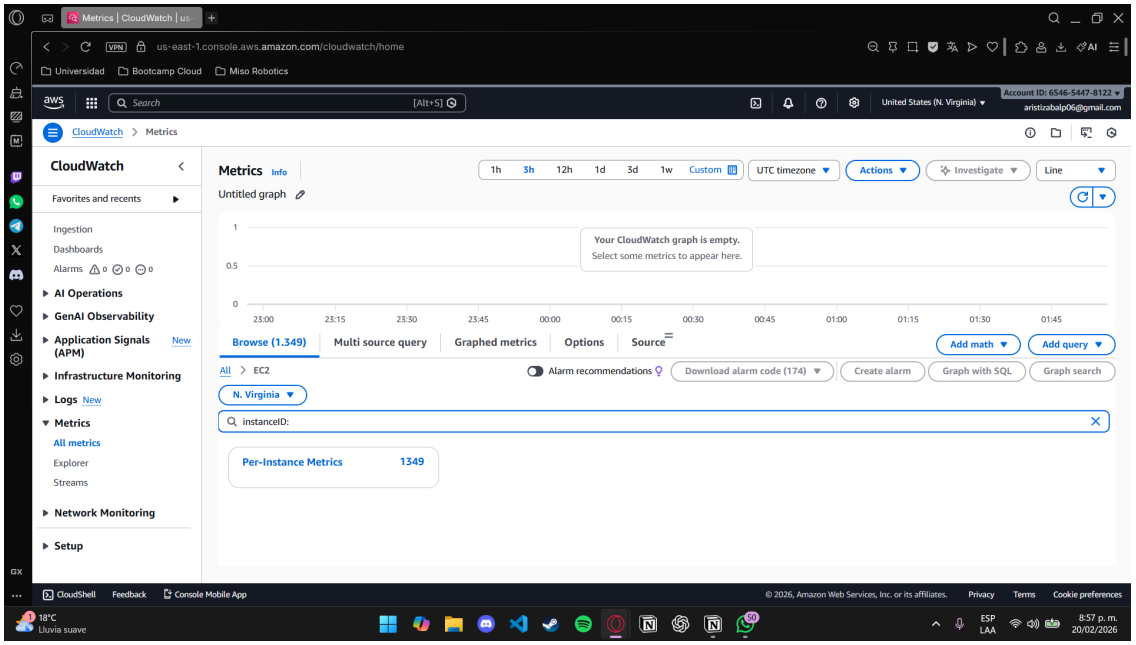


Cloudwatch

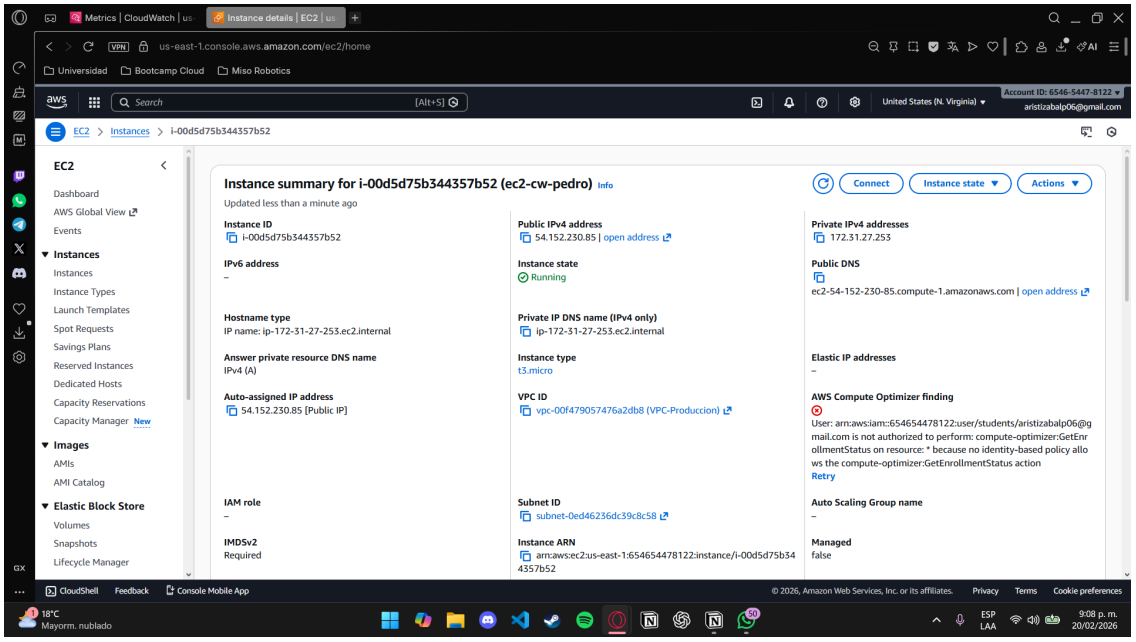
- Monitorea logs de servicios, para luego analizar sus metricas.

Crear una alarma

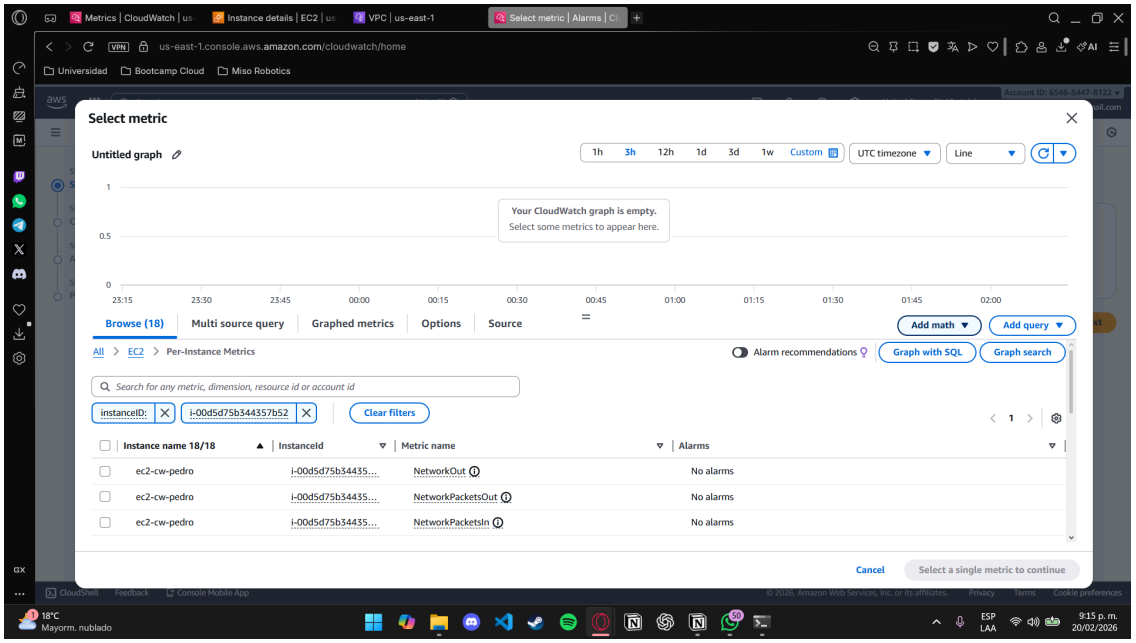
- Metrics → All metrics → seleccionar servicio → filtrar con el ID del servicio



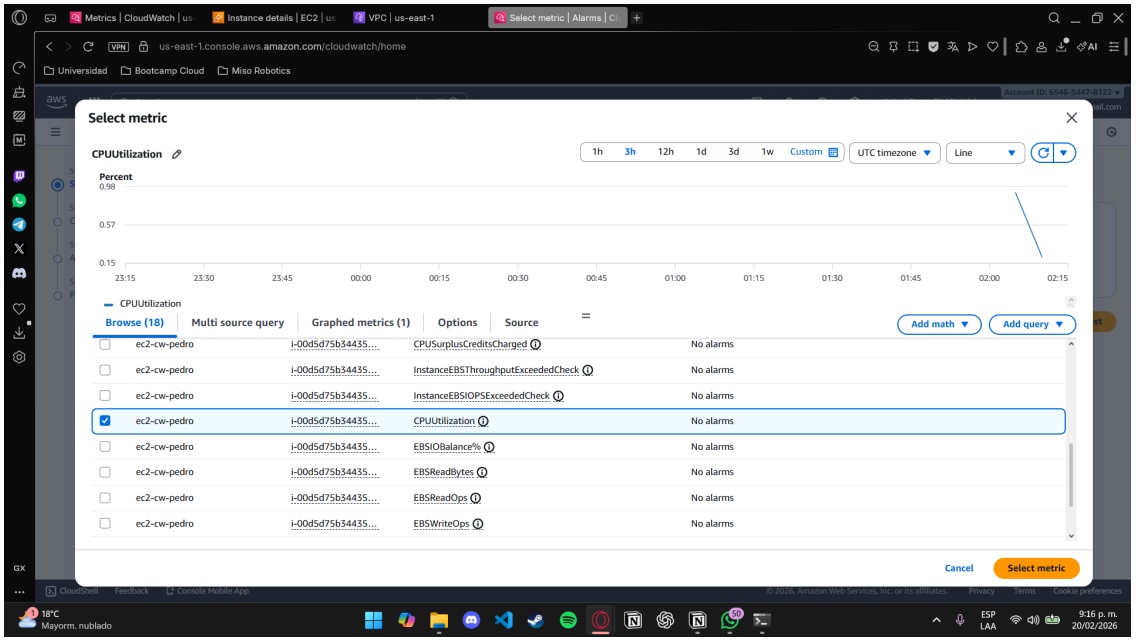
- Lanzamos instancia EC2



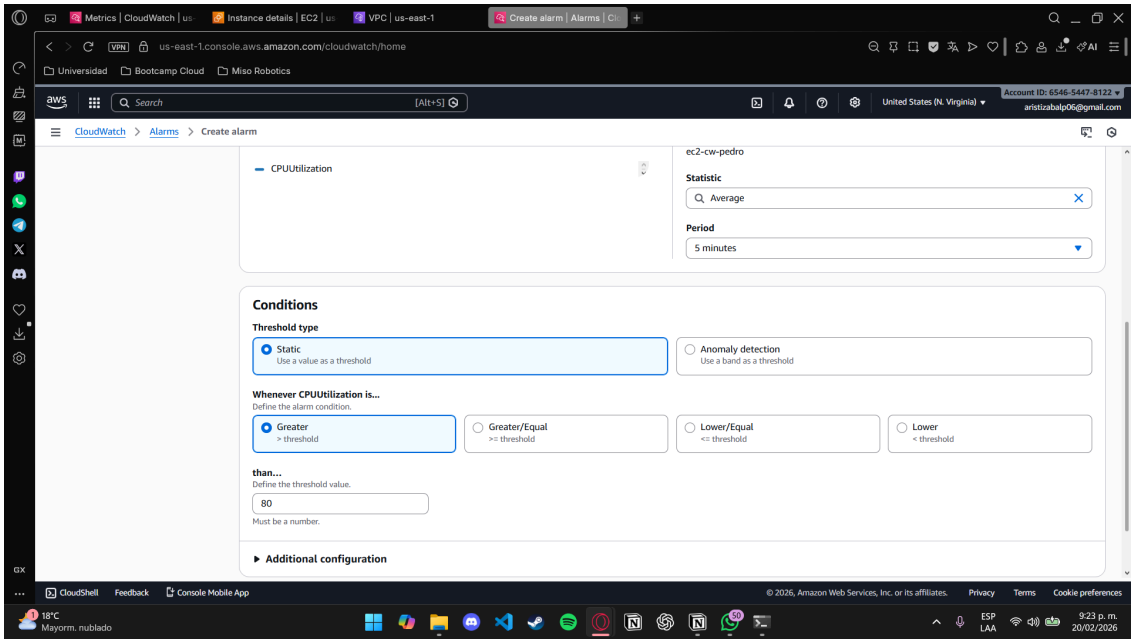
- Cloudwatch → alarms → create alarm → filtrar por ID de instancia



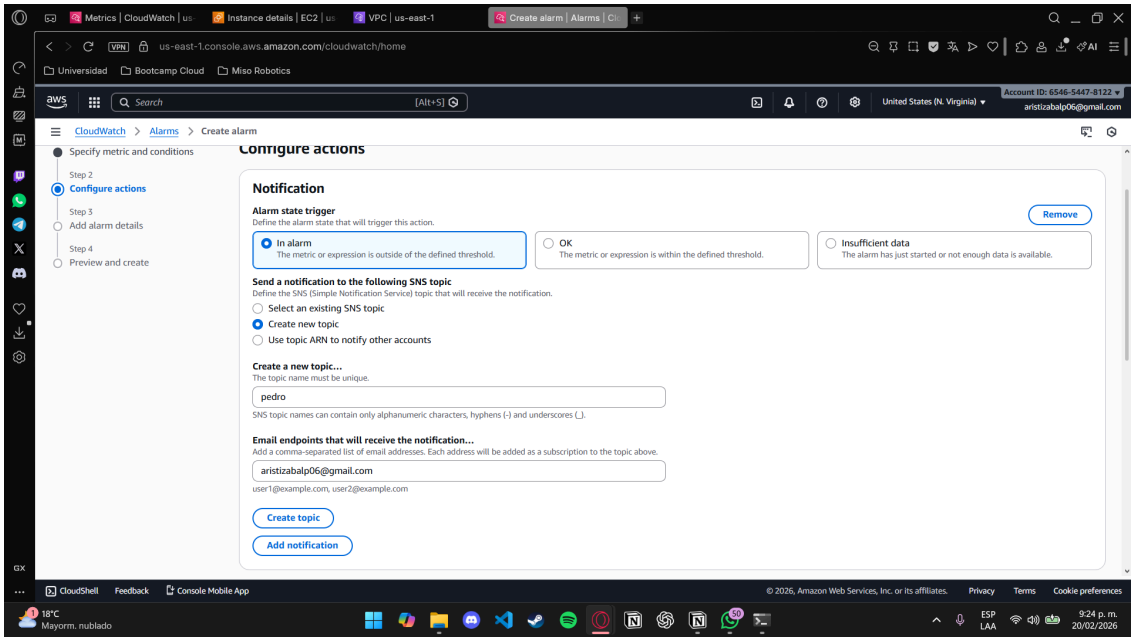
- Seleccionar la metrica a seguir



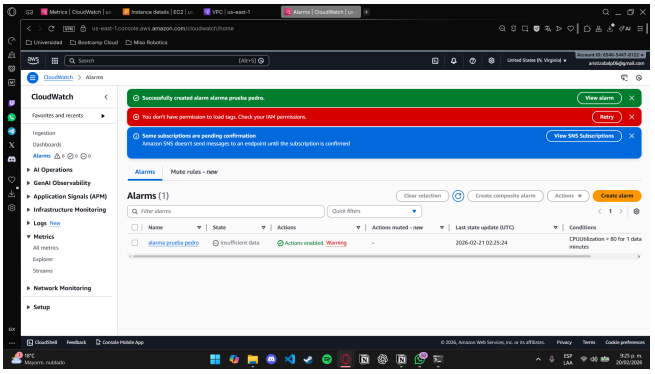
- asignar valores a seguir



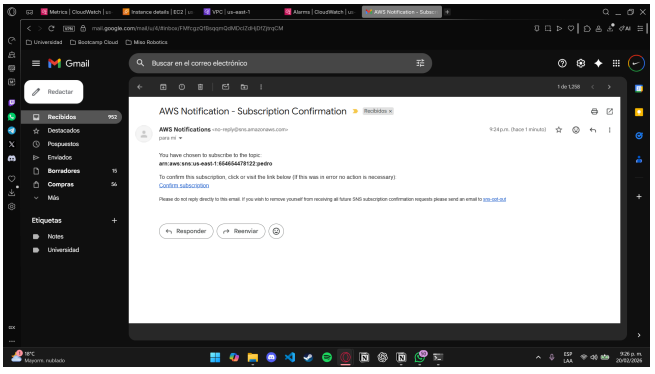
- crear new topic → nombre → endpoint (correo al que llegara la notificacion)



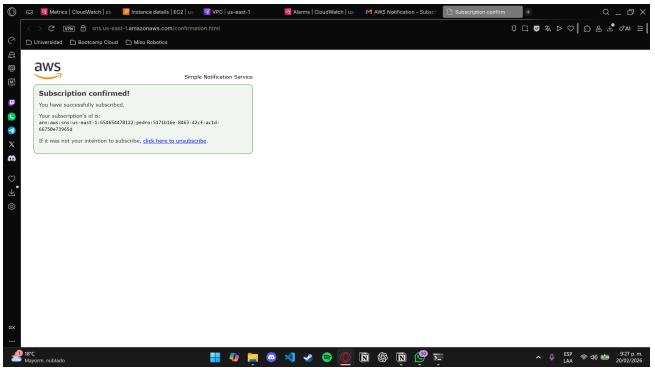
- Continuar → poner nombre de alarma → crear



- Notificacion al correo



- confirmar suscripcion



- Comando para prueba de estres de cpu

sudo dnf install stress -y → Instala utilidad para estresar el servidor

stress --cpu $(nproc) --timeout 300 & → Envía a segundo plano el test de estré

- Nos conectamos a la instancia

```

ALARM: "alarma prueba pedro" in US East (N. Virginia)
Recibidos ×
AWS Notifications <no-reply@sns.amazonaws.com>
para mí
9:42 p.m. (hace 1 minuto)
You are receiving this email because your Amazon CloudWatch Alarm "alarma prueba pedro" in the US East (N. Virginia) region has entered the ALARM state, because "Threshold Crossed: 1 out of the last 1 datapoints [99.99417268822216 (21/02/26 02:37:00)] was greater than the threshold (80.0) (minimum 1 datapoint for OK -> ALARM transition)." at "Saturday 21 February, 2026 02:42:42 UTC".
View this alarm in the AWS Management Console:
https://us-east-1.console.aws.amazon.com/cloudwatch/deeplink.js?region=us-east-1#alarmsV2:alarm/alarma%20prueba%20pedro
Alarm Details:
- Name: alarma prueba pedro
- Description:
- State Change: OK -> ALARM
- Reason for State Change: Threshold Crossed: 1 out of the last 1 datapoints [99.99417268822216 (21/02/26 02:37:00)] was greater than the threshold (80.0) (minimum 1 datapoint for OK -> ALARM transition).
- Timestamp: Saturday 21 February, 2026 02:42:42 UTC
- AWS Account: 654654478122
- Alarm Arn: arn:aws:cloudwatch:us-east-1:654654478122:alarm:alarma prueba pedro
Threshold:
- The alarm is in the ALARM state when the metric is GreaterThanThreshold 80.0 for at least 1 of the last 1 period(s) of 300 seconds.
